PARS TECHNOLOGY
INVESTMENT GROUP

CORPORATE PROFILE · STRATEGIC PARTNERSHIP OVERVIEW · 2026

PARS Technology Investment Group

FROM INFRASTRUCTURE TO INTELLIGENCE.

FROM TECHNOLOGY TO BUSINESS.

FROM PROJECTS TO ECOSYSTEMS.

AI · TECHNOLOGY · INVESTMENT · VENTURE BUILDING

An integrated ecosystem across the entire technology value chain.

PARS Iranian is an Iranian technology and innovation company building an integrated ecosystem across Artificial Intelligence, Digital Infrastructure, Data, Intelligent Platforms, Industry Solutions, Technology Investment and Venture Building.

Unlike conventional technology companies that primarily deliver individual software projects, PARS is developing an integrated model that connects infrastructure, data, intelligence and business creation under one architecture.

02 — WHO WE ARE

Four capabilities usually separated across four different organizations.

PARS combines all four inside a single operating model.

01

Technology Company

Designing and developing AI, digital platforms, data infrastructure, enterprise systems and intelligent applications.

02

Transformation Partner

Moving organizations from traditional operating models toward digitally integrated, AI-native organizations.

03

Technology Investor

Investing in technology companies and acquiring strategic stakes in businesses with technological and market synergies.

04

Venture Builder

Turning technology, IP, research and market opportunities into new products, startups, platforms and businesses.

THE COMPLETE JOURNEY

Research → Technology → Product → Market → Investment → **Scale**

03 — TECHNOLOGY ARCHITECTURE

The PARS 5-Layer Architecture

A five-layer architecture designed to connect raw infrastructure with intelligent business services — so that every layer compounds the value of the one beneath it.

From compute to commercial intelligence.

LAYER 05	**Intelligent Services**	12 strategic industry verticals · vertical AI products · industry platforms · intelligent business services
LAYER 04	**Intelligence Platforms**	Enterprise AI Platform · AI Fabric · Agent Platform · AI Orchestration · Knowledge Intelligence · Financial AI Platform · AI Command Center · Enterprise Copilot · Intelligent Automation
LAYER 03	**Intelligence Protocols**	LLM Gateway · model interoperability · AI orchestration · agent communication · tool calling · context & memory · RAG · identity & access · AI governance
LAYER 02	**Development & Data**	Software development platforms · data platforms · data integration · API management · integration platforms · data governance · knowledge management · developer tools
LAYER 01	**Infrastructure**	Computing · cloud & hybrid · storage · networking · cybersecurity · DevOps · MLOps · AI infrastructure · application infrastructure

LAYER 05 — INTELLIGENT SERVICES

12 strategic industry verticals.

One shared intelligence stack, twelve industry-specific service portfolios.

01
Education
AI tutors, adaptive learning, personalized education, learning analytics, gamification.

02
Financial Services
Digital financial infrastructure, wallets, financial intelligence, embedded finance.

03
Banking
AI-native banking, customer intelligence, risk, fraud intelligence, digital banking.

04
Healthcare
Digital health platforms, health data, patient engagement, AI-assisted care.

05
Energy
Intelligent energy management, operational intelligence, predictive analytics.

06
Real Estate
Digital property platforms, construction intelligence, smart housing ecosystems.

07
Logistics
Supply-chain optimization, routing, fleet intelligence, operational automation.

08
Agriculture
Smart farming, agricultural intelligence, marketplaces, supply-chain optimization.

09
Content & Media
AI content creation, content intelligence, personalization, recommendation.

10
Industrial Design
AI-assisted design, engineering intelligence, simulation, product development.

11
Manufacturing
Industrial AI, predictive maintenance, quality control, industrial analytics.

12
Mining
Mining intelligence, operational optimization, resource intelligence, decision support.

Five enablers that turn capability into compounding advantage.

ENABLER 01

Human Capital Hub

Identifying, developing, organizing and deploying specialized technology and AI talent.

Talent → Projects → Products → Businesses

ENABLER 02

Data Hub

Transforming data into a strategic technology and business asset.

Acquisition · Integration
Management · Governance
Quality · Data products
AI-ready data

ENABLER 03

Research Hub

Connecting research and innovation with commercial technology development.

AI research · R&D
Market intelligence
Technology scouting
PoC · Tech transfer

ENABLER 04

Venture Studio

Creating new businesses from technology, IP, research and market opportunities.

Idea → Prototype → MVP → Product → Startup → Scale

Ventures · SPVs · JVs

ENABLER 05

Market Growth Accelerator

Technology does not create value until it reaches the market.

GTM strategy · Enterprise sales
Channels · Partnerships
Product-market fit
Revenue growth

Together these enablers shorten the distance between research, technology, product and market — the core of PARS's shift from a project-centric to a product and platform-centric business.

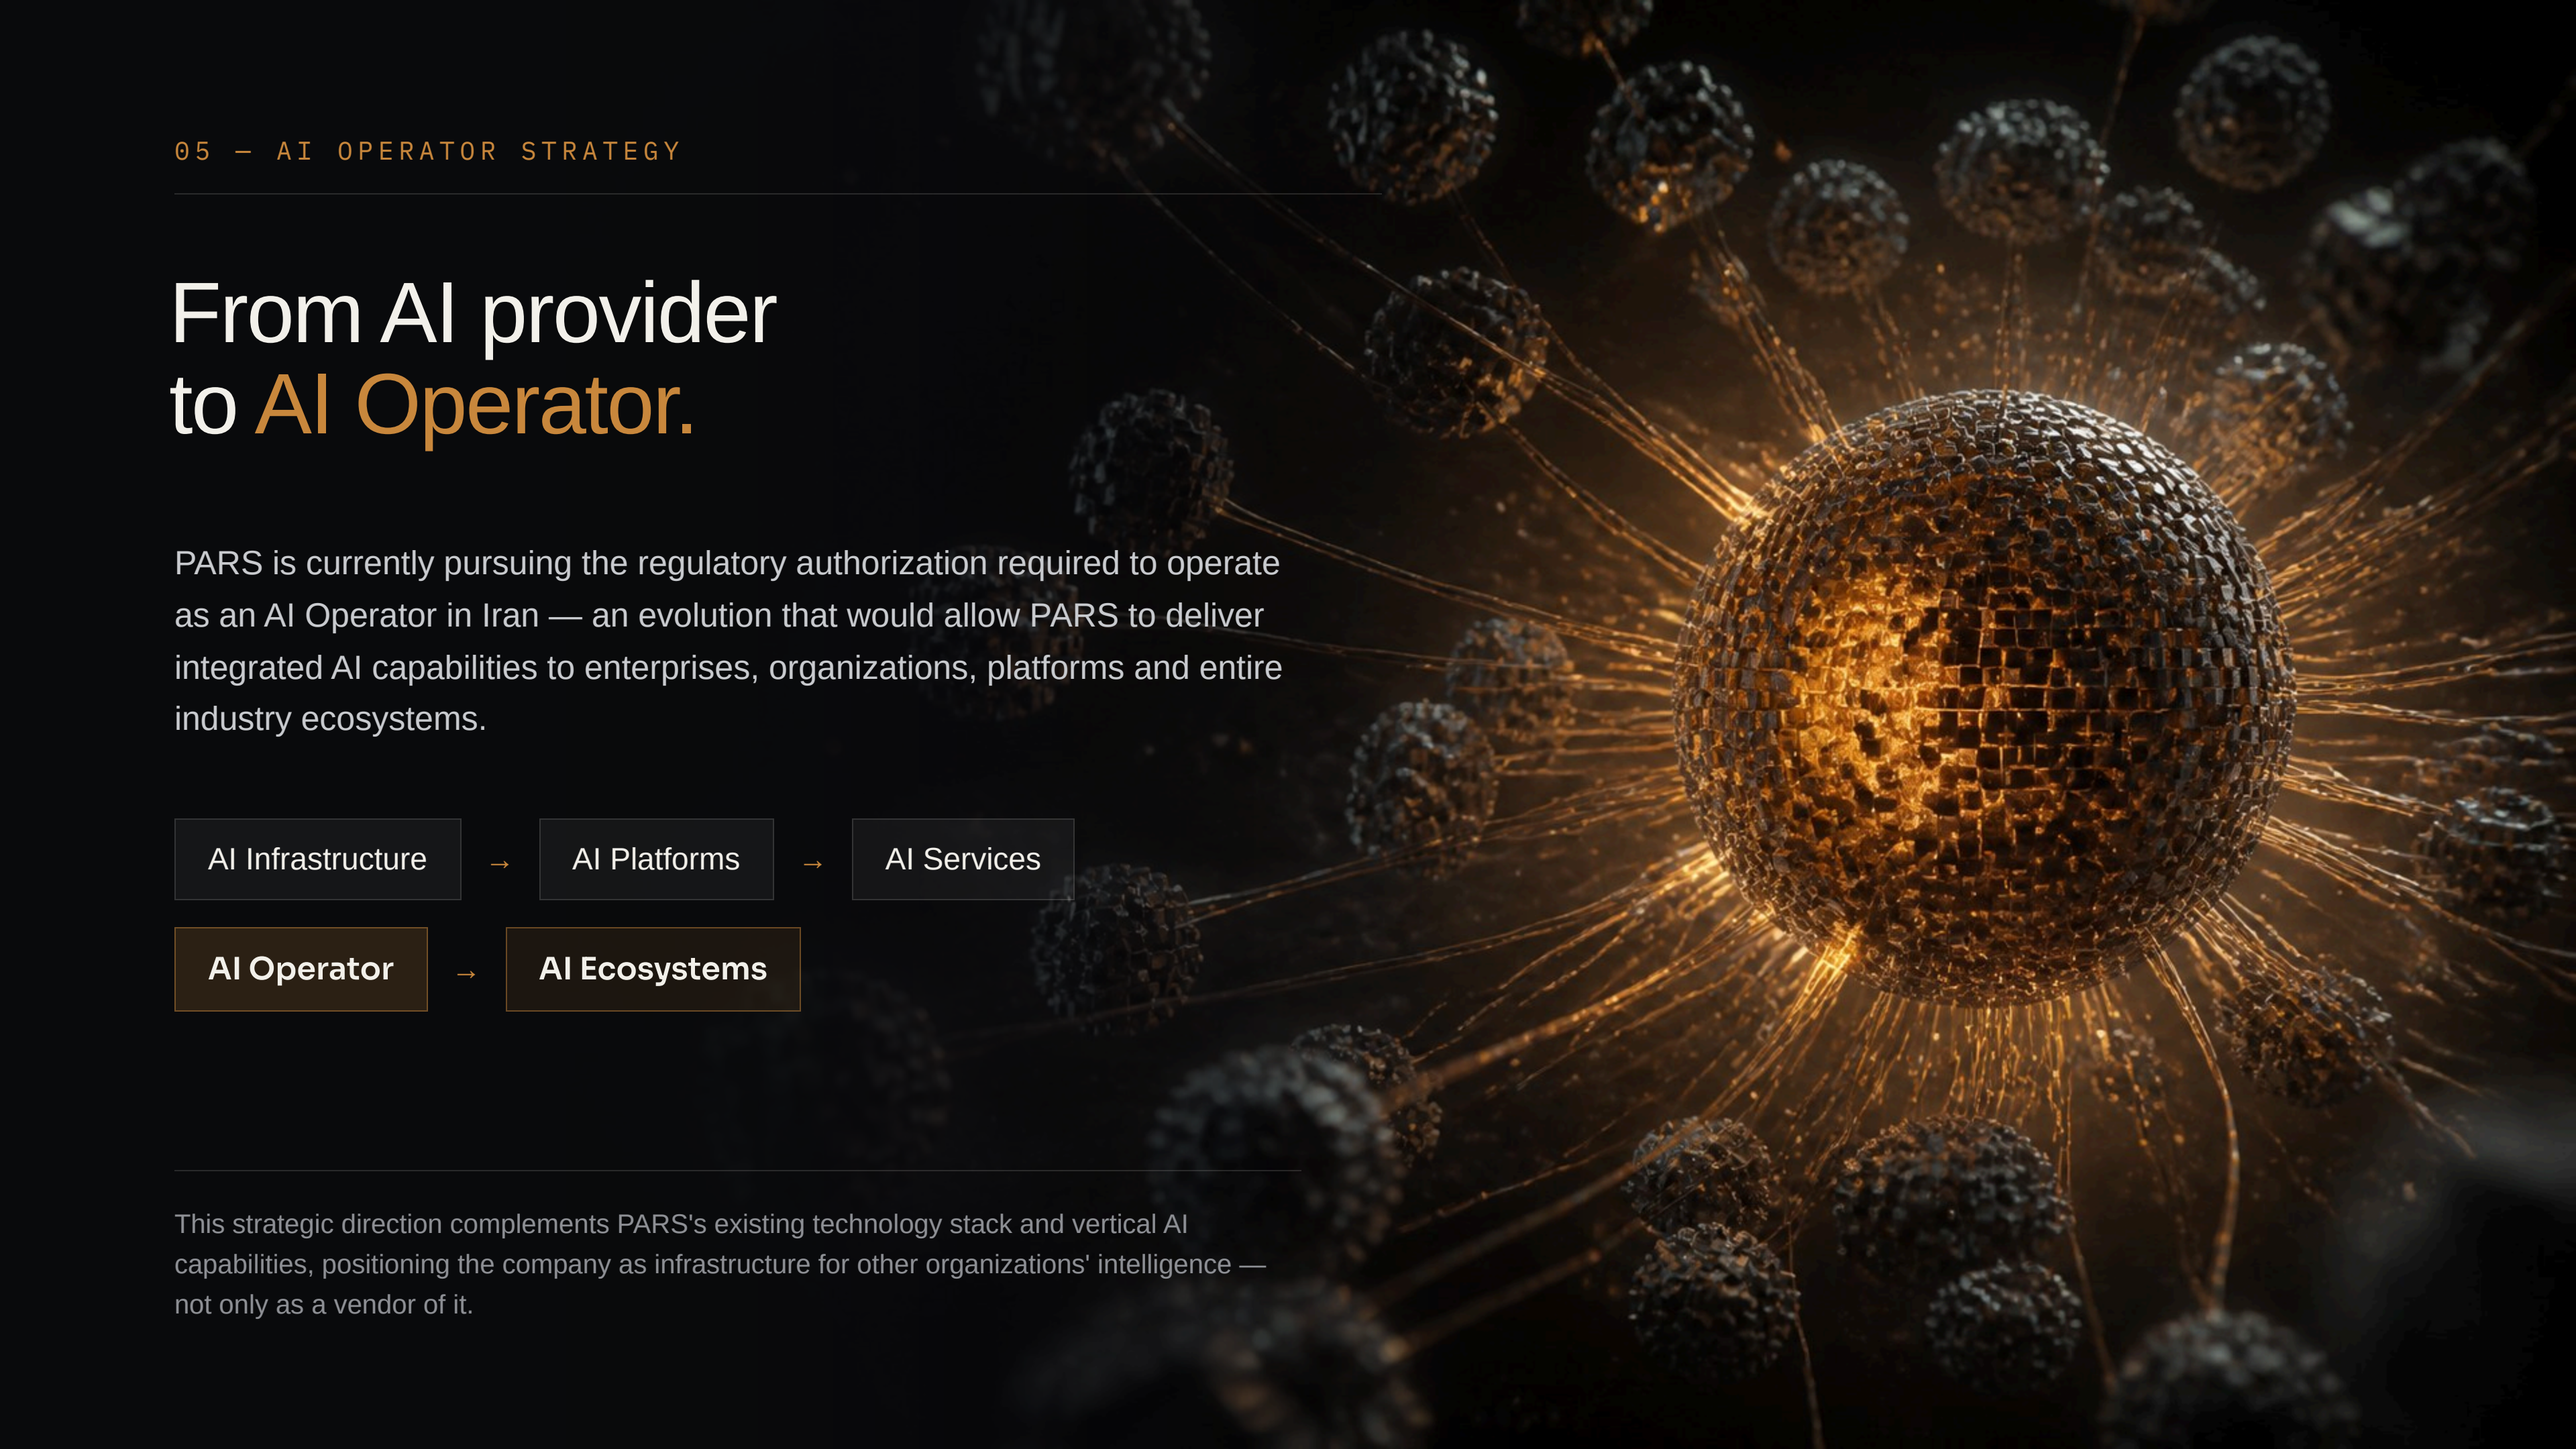

05 — AI OPERATOR STRATEGY

From AI provider to AI Operator.

PARS is currently pursuing the regulatory authorization required to operate as an AI Operator in Iran — an evolution that would allow PARS to deliver integrated AI capabilities to enterprises, organizations, platforms and entire industry ecosystems.

AI Infrastructure → AI Platforms → AI Services

AI Operator → **AI Ecosystems**

This strategic direction complements PARS's existing technology stack and vertical AI capabilities, positioning the company as infrastructure for other organizations' intelligence — not only as a vendor of it.

Portfolio snapshot.

The strategic objective: transform a collection of individual projects into a structured technology asset base.

200+

AI & TECHNOLOGY INITIATIVES

12

STRATEGIC INDUSTRY VERTICALS

5

ECOSYSTEM ENABLERS

5

TECHNOLOGY ARCHITECTURE LAYERS

Multiple

PLATFORMS, BRANDS, INVESTMENTS & VENTURES

A structured commercialization model.

Identifying high-potential technologies and turning them into scalable businesses, stage by stage.

STAGE 01

Technology & Research

Applied research, technology scouting and emerging-technology analysis.

STAGE 02

Proof of Concept

Validating technical feasibility against a real enterprise problem.

STAGE 03

Product-ization

Packaging proven technology into a repeatable product.

STAGE 04

Platform-ization

Turning the product into reusable infrastructure others can build on.

STAGE 05

Commercial Business

Revenue models, enterprise sales and market expansion.

STAGE 06

Ecosystem

Partners, ventures and third parties building on the platform.

TALENT → PROJECTS → PRODUCTS → BUSINESSES

The shift from a project-centric organization to a product and platform-centric business.

Delivered across the major economic sectors.

- Banking transformation
- Financial infrastructure
- Education technology
- E-commerce transformation
- Government & public sector
- Insurance transformation
- Digital wallet platforms
- Healthcare technology
- Smart industry
- AI-native enterprise
- Enterprise AI assistants
- Sports & wellness
- Digital ecosystems

Business Impact

For selected engagements PARS can provide detailed case studies. Detailed commercial and technical information can be made available subject to confidentiality requirements and NDA.

09 & 10 — FINANCIAL INFRASTRUCTURE · WALLET-AS-A-SERVICE

Financial capability, consumed as infrastructure.

A modular Financial Infrastructure-as-a-Service architecture that allows banks, financial institutions, enterprises and ecosystems to consume financial capabilities as reusable building blocks.

FIAAS BUILDING BLOCKS

Identity	Wallet	Ledger	Payment	Consent
Rules Engine	API Gateway	Notifications	Reporting	**AI Services**

WALLET-AS-A-SERVICE

Wallet Studio / Wallet Factory

Configure and launch new wallet products without rebuilding the underlying financial infrastructure.

- Consumer wallets
- Corporate wallets
- Merchant wallets
- Employee wallets
- Ecosystem wallets
- Embedded financial services

One common intelligence layer for the whole enterprise.

Multiple AI applications, copilots and autonomous agents operating on shared intelligence infrastructure.

CONSUMERS **Enterprise Applications** **Copilots** **Autonomous Agents** **Industry Services**

↓

PARS AI FABRIC — CORE COMPONENTS

LLM Gateway	Prompt Management	Model Management	Enterprise Knowledge	RAG	Memory
Agent Runtime	Tool Integration	AI Orchestration	**AI Governance**	AI APIs	Context Protocols

Instead of isolated AI pilots, every application inherits the same gateway, knowledge, memory, orchestration and governance — so the second AI use case costs a fraction of the first.

Technology becomes a business when capital sits beside it.

Capital + Technology + Talent + Data + Market Access → **New Businesses**

INVESTMENT CRITERIA

- Proprietary technology
- Strong market access
- Enterprise customers
- Scalable business models
- Strategic technology assets
- Ecosystem synergies
- Growth potential

INVESTMENT STRUCTURES

- Minority investment
- Strategic equity
- Majority acquisition
- Joint Venture
- SPV
- Corporate Venture
- Revenue-sharing partnership

VENTURE OUTCOMES

- Independent companies
- Strategic subsidiaries
- JV businesses
- Platform businesses
- Industry-specific AI companies

Each venture and brand is positioned by its technology, product, market, business model and strategic role in the PARS ecosystem.

Selected portfolio companies, brands and investments can be presented separately according to disclosure permissions.

Positioned at the intersection of four markets.

AI Technology

AI infrastructure, platforms, agents and intelligent applications.

Digital Transformation

Enterprise transformation and digital operating models.

Technology Investment

Strategic investment and acquisition of technology assets.

Venture Building

Creation of new products, startups and platform businesses.

CUSTOMER & MARKET FOOTPRINT

- Enterprises
- Financial institutions
- Government & public sector
- Technology companies
- Startups & scale-ups
- Industrial organizations

REVENUE MODEL

Technology Services	Product Revenue	Platform Revenue
SaaS / PaaS WaaS / FlaaS	Licensing	Managed Services
Joint Ventures	Strategic Investment	Venture Creation

PARS is not only a technology provider — it is building an integrated technology-to-business ecosystem.

Eight ways to build with PARS.

PARS is open to international collaboration through multiple commercial structures.

01

Technology Partnership

Technology integration and joint solution development.

02

Technology Transfer

Transfer and localization of technology for the Iranian market.

03

Co-Development

Joint development of products and platforms.

04

Joint Venture

A jointly owned business combining technology and market capabilities.

05

Strategic Investment

Equity investment in technology companies and platforms.

06

Licensing

Licensing of proprietary technologies and intellectual property.

07

Market Entry Partnership

Supporting international companies entering the Iranian market where legally feasible.

08

Regional Expansion

Joint development of technology products for regional markets.

Structures can be combined — most strategic relationships begin with a technology partnership and evolve toward co-development, joint venture or equity.

Eight reasons this model is hard to replicate.

01

Full-Stack Technology Capability

From infrastructure and data to AI platforms and intelligent services.

02

Multi-Vertical Experience

12 strategic industry domains.

03

AI-Native Strategy

Moving beyond traditional digital transformation toward AI-native organizations.

04

Technology + Capital

Combining technology development with investment capabilities.

05

Venture Building

Ability to transform technology into businesses.

06

Market Access

Enterprise relationships and industry-oriented commercialization capabilities.

07

Ecosystem Approach

Talent, data, research, venture creation and market growth under one model.

08

Operator Ambition

Pursuing the regulatory position required to operate as an AI Operator in Iran.

Most partners can give you technology. Very few can give you technology, capital, talent and market access in one relationship.

Delivering at national scale.

Development and delivery of intelligent services to ministries, national organizations and public institutions.

01 · AI INFRASTRUCTURE

AI Infrastructure Operator Services

Development and delivery of national AI infrastructure operator services.

MINISTRY OF ICT

02 · LOGISTICS

Intelligent Supply Chain Services

Import and export logistics management across national trade corridors.

PLAN & BUDGET ORGANIZATION · MINISTRIES OF ROADS, AGRICULTURE & INDUSTRY

03 · TERRITORIAL PLANNING

Smart Land-Use Planning & Fuel Monitoring

Intelligent territorial planning and national fuel-consumption monitoring.

PLAN & BUDGET ORGANIZATION

04 · EDUCATION

Digital Smart School Services

+2M STUDENTS

MINISTRY OF EDUCATION

05 · PLANNING

AI-Based Advanced Planning Services

Advanced planning and scheduling powered by artificial intelligence.

MINISTRY OF ROADS & URBAN DEVELOPMENT

06 · AGRICULTURE

Smart Livestock Management

30,000 CATTLE

ASTAN QUDS RAZAVI · MIHAN CO.

The livestock program serves as the pilot for a national milk, dairy and protein management initiative. Programs are at varying stages of development, authorization and delivery.

The portfolio, product by product.

Technology and AI products developed across the PARS ecosystem and its ventures.

Iran Digital	Smart School & Mandegar Alborz National Campaign	Algonet APS	Okyan	Janfada Suite
C-Gate & Refah Yar	Enterprise Device	Sepidor (Revised)	Okyan Console	Shahrag Service
Ava & Smart Call Center	Kardano	Finka	Global Supply Chain	Kaya Freelancing Platform
Sinus Vibration Monitoring Suite	Sharif Clinic	Smart Vehicle Maintenance Management	Budget Assistant	AlloyAI
Integrated Energy Suite — Power, Gas & Fuel	Karvan Marketing Base Platform	Decentralized Banking	Observable Smart Meters	Internal Smart Dispatching
Smart Local Renewable Power Management	Micro Energy Trading Market	Smart Energy Assistant	**AI Agent Studio**	Kaya Pay
Delta AI	Bourse Tech	Kesht Net (Agri OS)	Mooniva	Tebify

Platforms and brands carrying the portfolio to market.

Named platforms, operating systems and venture brands positioned within the PARS ecosystem.

01 Sepidor (Betacore)	02 Algonet APS	03 AI Agent Studio	04 Aither & Argus	05 IDO Center
06 D.G.X Enterprise Device	07 Sinus Suite	08 Smart Parking	09 Smart School	10 Smart Call Center
11 Sharif Clinic (H.OS)	12 CredIQ	13 Pisheh	14 Smart Banking (B.OS)	15 C-Gate
16 Smart Pathology	17 Energy Inbox	18 Sanagen	19 Super Rose	20 Sad Board

Each product and brand is positioned within the PARS ecosystem by its technology, product, market, business model and strategic role. Detailed product briefs available under NDA.

Infrastructure enables Platforms.

Platforms enable Intelligence.

Intelligence enables Services.

Services create Businesses.

Businesses create Ecosystems.

And ecosystems create long-term strategic value.
